

C

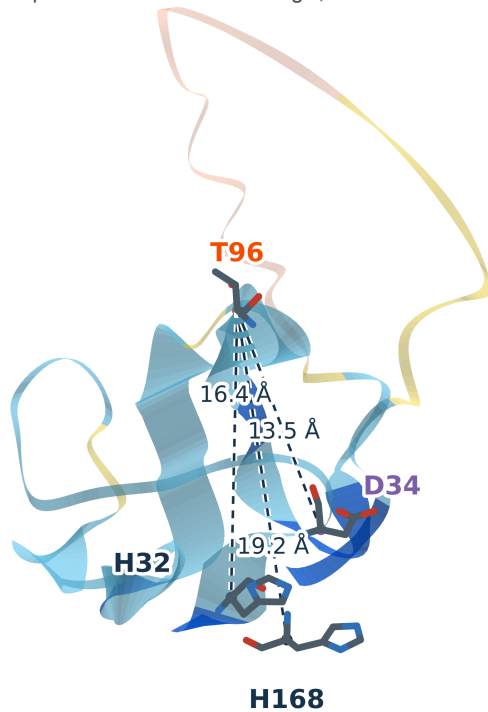

Ectodomain cartoon, luminal face up
T96 sits at the edge of the modelled core (pLDDT 79%)

model confidence (pLDDT)

- very low (<50)
- low (50-70)
- confident (70-90)
- very high (>90)

T96 environment: side chains and Ca-Ca distances for the two published residues in range; H175 is 37.8 Å away

The uptake-critical histidines are not closer to T96 than chance:
2 of 3 within 20 Å (binomial $p = 0.38$)
