

A The four published intervals, every trait

Strongest marker per 10 kb. Grey band is the published interval, drawn with 25% flanking. Dashed = Bonferroni.

delta (MIP) delta (WGS) log-ratio (WGS) published (MIP)

B Do the traits agree on the shape of the local signal?

Spearman of $-\log_{10} p$ across markers INSIDE each interval. High here does not imply either trait detects the locus.
