

A SID-2 conservation, *C. elegans* against *C. briggsae*

47.3% identity over 296 aligned positions. All three histidines implicated in dsRNA uptake differ; N94 and T96 do not.

B Missense variation in the *C. elegans* population

All 17 missense variants in the sid-2 span across 540 CeNDR isotypes; labelled where AF ≥ 5%. Dotted lines mark the panel A residues.
