

A

Phenotype distribution

n = 231 of 366 strains in the trait file

B

Association scan

GEMMA LOCO on *vst_ctrl_pos-1_T2*, 464,045 markers, n = 231 strains. Grey dashed is Bonferroni over every marker, which assumes they are independent; green dotted divides alpha by the 1,972 effective independent tests estimated from the eigenvalues of the marker correlation matrix. 10 markers clear Bonferroni, 466 clear the eigen threshold.
